Pressed for Time Oct 23 2019 In Pressed for Time, Judy Wajcman explains why we immediately interpret our experiences with digital technology as inexorably accelerating everyday life. She argues that we are not mere hostages to communication devices, and the sense of always being rushed is the result of the priorities and parameters we ourselves set rather than the machines that help us set them."--Jacket.

One at a Time Jan 19 2022 How does God want to use you to have an impact? Most of us don't want to spend our lives being time-wasters, space-takers, binge-watchers, or game-players. We want to be difference-makers. But how do we do it? By revealing the way Jesus valued people, bestselling author Kyle Idleman shows us the Jesus way of changing the world--by loving people one at a time. Influencing just one person at a time may seem insignificant at first look. But as we better understand the surprising habits of Jesus, we unlock the power of small things done with great love and discover how God wants to use us to change the world one person at a time.

A Memory of Light Sep 26 2022 In the conclusion to the "Wheel of Time" series, all of humanity is in peril as Rand al'Thor moves forward to break the seals on the Dark One's prison and the Last Battle will determine the fate of the world.

The Mammoth Book of Time Travel SF Apr 29 2020 This thought-provoking collection not only takes us into the past and the future, but also explores what might happen if we attempt to manipulate time to our own advantage. These stories show what happen once you start to meddle with time and the paradoxes that might arise. It also raises questions about whether we understand time, and how we perceive it. Once we move outside the present day, can we ever return or do we move into an alternate world? What happens if our meddling with Nature leads to time flowing backwards, or slowing down or stopping all together? Or if we get trapped in a constant loop from which we can never escape. Is the past and future immutable or will we ever be able to escape the inevitable? These are just some of the questions that are raised in these challenging, exciting and sometimes amusing stories by Kage Baker, Simon Clark, Fritz Leiber, Christopher Priest, Kristine Kathryn Rusch, Robert Silverberg, Michael Swanwick, John Varley and many others.

The Nature of Time and Consciousness in Islam Dec 06 2020

The Order of Time May 23 2022 'A dazzling book ... the new Stephen Hawking' Sunday Times The bestselling author of Seven Brief Lessons on Physics takes us on an enchanting, consoling journey to discover the meaning of time 'We are time. We are this space, this clearing opened by the traces of memory inside the connections between our neurons. We are memory. We are nostalgia. We are longing for a future that will not come.' Time is a mystery that does not cease to puzzle us. Philosophers, artists and poets have long explored its meaning while scientists have found that its structure is different from the simple intuition we have of it. From Boltzmann to quantum theory, from Einstein to loop quantum gravity, our understanding of time has been undergoing radical transformations. Time flows at a different speed in different places, the past and the future differ far less than we might think, and the very notion of the present evaporates in the vast universe. With his extraordinary charm and sense of wonder, bringing together science, philosophy and art, Carlo Rovelli unravels this mystery. Enlightening and consoling, The Order of Time shows that to understand ourselves we need to reflect on time -- and to understand time we need to reflect on ourselves. Translated by Simon Carnell and Erica Segre

Becoming Friends of Time Jul 13 2021 Time is central to all that humans do. Time structures days, provides goals,

shapes dreams--and limits lives. Time appears to be tangible, real, and progressive, but, in the end, time proves illusory. Though mercurial, time can be deadly for those with disabilities. To participate fully in human society has come to mean yielding to the criterion of the clock. The absence of thinking rapidly, living punctually, and biographical narration leaves persons with disabilities vulnerable. A worldview driven by the demands the clock makes on the lives of those with dementia or profound neurological and intellectual disabilities seems pointless. And yet, Jesus comes to the world to transform time. Jesus calls us to slow down, take time, and learn to recognize the strangeness of living within God's time. He calls us to be gentle, patient, kind; to walk slowly and timefully with those whom society desires to leave behind. In *Becoming Friends of Time*, John Swinton crafts a theology of time that draws us toward a perspective wherein time is a gift and a calling. Time is not a commodity nor is time to be mastered. Time is a gift of God to humans, but is also a gift given back to God by humans. Swinton wrestles with critical questions that emerge from theological reflection on time and disability: rethinking doctrine for those who can never grasp Jesus with their intellects; reimagining discipleship and vocation for those who have forgotten who Jesus is; reconsidering salvation for those who, due to neurological damage, can be one person at one time and then be someone else in an instant. In the end, Swinton invites the reader to spend time with the experiences of people with profound neurological disability, people who can change our perceptions of time, enable us to grasp the fruitful rhythms of God's time, and help us learn to live in ways that are unimaginable within the boundaries of the time of the clock.

Art in Time Dec 26 2019 *Art in Time* is the first book to embed art movements within the larger context of politics and history. Global in scope and featuring an innovative present-to-past arrangement, the book's accessible text looks back on the most significant art styles and movements, from the present day to antiquity. Pages of historical photographs, documents, newspaper headlines, and other ephemera evoke the times in which styles and movements arose. The book opens with *The Information Age* (Internet Art, Neo-Expressionism, Arte Povera) and closes with *The Classical Age* (Roman wall painting, Hellenistic Greek style), covering everything from Photorealism, Art Brut, Ukiyo-e, and Byzantine style in between. An integrated timeline provides a linear thread throughout the book, while succinct, authoritative text illuminates key points.

The End of Time Jun 23 2022 Richard Feynman once quipped that "Time is what happens when nothing else does." But Julian Barbour disagrees: if nothing happened, if nothing changed, then time would stop. For time is nothing but change. It is change that we perceive occurring all around us, not time. Put simply, time does not exist. In this highly provocative volume, Barbour presents the basic evidence for a timeless universe, and shows why we still experience the world as intensely temporal. It is a book that strikes at the heart of modern physics. It casts doubt on Einstein's greatest contribution, the spacetime continuum, but also points to the solution of one of the great paradoxes of modern science, the chasm between classical and quantum physics. Indeed, Barbour argues that the holy grail of physicists--the unification of Einstein's general relativity with quantum mechanics--may well spell the end of time. Barbour writes with remarkable clarity as he ranges from the ancient philosophers Heraclitus and Parmenides, through the giants of science Galileo, Newton, and Einstein, to the work of the contemporary physicists John Wheeler, Roger Penrose, and Steven Hawking. Along the way he treats us to enticing glimpses of some of the mysteries of the universe, and presents intriguing ideas about multiple worlds, time travel, immortality, and, above all, the illusion of motion. *The End of Time* is a vibrantly written and revolutionary book. It turns our understanding of reality inside-out.

The Order of Time Oct 04 2020 One of *TIME's* Ten Best Nonfiction Books of the Decade "Meet the new Stephen Hawking . . . *The Order of Time* is a dazzling book." --*The Sunday Times* From the bestselling author of *Seven Brief Lessons on Physics*, *Reality Is Not What It Seems*, *Helgoland*, and *Anaximander* comes a concise, elegant exploration of time. Why do we remember the past and not the future? What does it mean for time to "flow"? Do we exist in time or does time exist in us? In lyric, accessible prose, Carlo Rovelli invites us to consider questions about the nature of time that continue to puzzle physicists and philosophers alike. For most readers this is unfamiliar terrain. We all experience time, but the more scientists learn about it, the more mysterious it remains. We think of it as uniform and universal, moving steadily from past to future, measured by clocks. Rovelli tears down these assumptions one by one, revealing a strange universe where at the most fundamental level time disappears. He explains how the theory of quantum gravity attempts to understand and give meaning to the resulting extreme landscape of this timeless world. Weaving together ideas from philosophy, science and literature, he suggests that our perception of the flow of time depends on our perspective, better understood starting from the structure of our brain and emotions than from the

physical universe. Already a bestseller in Italy, and written with the poetic vitality that made *Seven Brief Lessons on Physics* so appealing, *The Order of Time* offers a profoundly intelligent, culturally rich, novel appreciation of the mysteries of time.

Out of Time Sep 14 2021 "In this explosive thriller, a fiendishly clever serial bomber and self-styled "eco-terrorist" hits targets across America -- and a conflicted young FBI agent may be the only person with the unique skills needed to catch him. A massive FBI manhunt is underway for an elusive and terrifyingly efficient serial bomber. He's just struck his sixth target, Idaho's Boone Dam, killing a dozen innocent people. But the bomber, who calls himself "Green Man," insists these drastic acts of violence--each one carefully selected to target major human-created infrastructure--are necessary to draw the world's attention to the climate change emergency. The FBI has no real leads. It's as if Green Man can predict every step of their investigation, skillfully evading all their standard tactics. Until young agent Tom Smith approaches the task-force leader with an unexpected insight. Tom, a computer programmer by training, may be the only person with the unique skill set needed to catch Green Man before he strikes again..."--

A Stitch of Time May 11 2021 A memoir from "a 27-year-old actress who suffered a massive brain aneurysm onstage at the Edinburgh Fringe Festival, and awoke to discover that she had aphasia, a rare condition in which one loses the ability to speak, read, and write"--Provided by publisher.

This Time for Me Mar 09 2021 An emotional, funny, and fabulous memoir by trailblazing and award-winning Trans actor and activist Alexandra Billings. Born in 1962, Alexandra Billings grew up in a decade in which being herself was illegal. When she started transitioning in 1980, the word "Transgender" didn't exist. With no Trans role models and no path to follow, Alexandra did what her family, teachers, and even friends said was impossible: Alexandra forged ahead. Spanning five decades, from profound lows to exhilarating highs, *This Time for Me* captures the events of a pioneering life. An award-winning actor and history-making LGBTQ and HIV/AIDS activist, Alexandra shares not only her own ever-evolving story but also the parallel ways in which queer identity has dramatically changed since the Stonewall riots of 1969. She weaves a true coming-of-age story of richly imaginative lies, of friends being swept away by a plague that decimated the community, of her determination to establish a career that would break boundaries, and of the recognition of her own power. A celebration of endless possibilities, Alexandra's bracing memoir is a fight-to-the-death revolution against all expectations.

Change of Time and Change of Measure Dec 18 2021 *Change of Time and Change of Measure* provides a comprehensive account of two topics that are of particular significance in both theoretical and applied stochastics: random change of time and change of probability law. Random change of time is key to understanding the nature of various stochastic processes, and gives rise to interesting mathematical results and insights of importance for the modeling and interpretation of empirically observed dynamic processes. Change of probability law is a technique for solving central questions in mathematical finance, and also has a considerable role in insurance mathematics, large deviation theory, and other fields. The book comprehensively collects and integrates results from a number of scattered sources in the literature and discusses the importance of the results relative to the existing literature, particularly with regard to mathematical finance. In this Second Edition a Chapter 13 entitled 'A Wider View' has been added. This outlines some of the developments that have taken place in the area of *Change of Time and Change of Measure* since the publication of the First Edition. Most of these developments have their root in the study of the *Statistical Theory of Turbulence* rather than in *Financial Mathematics and Econometrics*, and they form part of the new research area termed 'Ambit Stochastics'.

THE ROAD OF TIME Dec 30 2022 This book completely changes our understanding of time, by showing how the future influences our present. It demonstrates that our thoughts, especially our intentions, necessarily influence the creation of our reality long before our actions. This concerns our future and not our present, contrary to the naïve idea that the observer could create their own reality, derived from quantum physics. The result is a true revelation of our creative role in the universe, which implies that our primary nature is spiritual in essence, meaning that pure love exists, not as a product of brain chemistry but as an energy more fundamental than gravitation or light, related to our free will through extra dimensions of space-time. Dr Philippe Guillemant also conducted a real experiment regarding strange coincidences and particularly synchronicities, after having discovered why and how it is possible to provoke them. Equipped with this "practical manual," the reader can also try it out. Written by a physicist, *The Road of Time* nevertheless reads like a novel. "This is now starting to be mainstream physics." Jacques Vallée

Time and Again Aug 02 2020 The 50th anniversary edition of the beloved classic that Stephen King has called "THE great time-travel story." Featuring a brand-new introduction by the New York Times bestselling author of *Recursion*, Blake Crouch. When advertising artist Si Morley is recruited to join a covert government operation exploring the possibility of time travel, he jumps at the chance to leave his mundane 20th-century existence and step into the past. But he also has another motivation for going back in time: a half-burned letter that tells of a mysterious, tragic death and ominously of "fire which will destroy the whole world." Traveling to New York City in January 1882 to investigate, he finds a Manhattan teeming with a different kind of life, the waterfront unimpeded by skyscrapers, open-air markets packed with activity, Central Park bustling with horse drawn sleighs—a city on the precipice of great things. At first, Si welcomes these trips as a temporary escape but when he falls in love with a woman he meets in the past, he must choose whether to return to modern life or live in 1882 for good. "Pure New York fun" (Alice Hoffman, New York Times bestselling author), *Time and Again* is meticulous recreation of New York in the late nineteenth century, exploring the possibilities of time travel to tell an ageless story of love, longing, and adventure. Finney's magnum opus has been a source of inspiration for countless science fiction writers since its first publication in 1970.

The Book of Time Jan 25 2020 In *The Book of Time* we see how philosophers, religions and scientists have tried to explain time as everything from a perfect cycle to ever-increasing chaos. We see how time works in the natural world and in our own bodies and minds, and how we've tried to measure it - first with calendars, then with increasingly sophisticated devices, from the Ancient Indian ghati and to the latest atomic clock. And from Aristotle to Einstein, we explore how time has been essential for scientists in their quest to understand the universe and everything in it. Not forgetting the deliciously weird world of time travel, explaining what is fact and what is fiction. This is the kind of book that you can dip into or read in depth - but either way we promise time will just fly by...

The Great Mental Models: General Thinking Concepts Feb 17 2022 The old saying goes, "To the man with a hammer, everything looks like a nail." But anyone who has done any kind of project knows a hammer often isn't enough. The more tools you have at your disposal, the more likely you'll use the right tool for the job - and get it done right. The same is true when it comes to your thinking. The quality of your outcomes depends on the mental models in your head. And most people are going through life with little more than a hammer. Until now. *The Great Mental Models: General Thinking Concepts* is the first book in *The Great Mental Models* series designed to upgrade your thinking with the best, most useful and powerful tools so you always have the right one on hand. This volume details nine of the most versatile, all-purpose mental models you can use right away to improve your decision making, productivity, and how clearly you see the world. You will discover what forces govern the universe and how to focus your efforts so you can harness them to your advantage, rather than fight with them or worse yet- ignore them. Upgrade your mental toolbox and get the first volume today. AUTHOR BIOGRAPHY Farnam Street (FS) is one of the world's fastest growing websites, dedicated to helping our readers master the best of what other people have already figured out. We curate, examine and explore the timeless ideas and mental models that history's brightest minds have used to live lives of purpose. Our readers include students, teachers, CEOs, coaches, athletes, artists, leaders, followers, politicians and more. They're not defined by gender, age, income, or politics but rather by a shared passion for avoiding problems, making better decisions, and lifelong learning. AUTHOR HOME Ottawa, Ontario, Canada

The Direction of Time Oct 28 2022 Distinguished physicist examines emotive significance of time, time order of mechanics, time direction of thermodynamics and microstatistics, time direction of macrostatistics, time of quantum physics, more. 1971 edition.

The Fullness of Time Nov 24 2019 The Low Countries were at the heart of innovation in Europe in the fifteenth century. Throughout this period, the flourishing cultures of the Low Countries were also wrestling with time itself. *The Fullness of Time* explores that struggle, and the changing conceptions of temporality that it represented and embodied showing how they continue to influence historical narratives about the emergence of modernity today. *The Fullness of Time* asks how the passage of time in the Low Countries was ordered by the rhythms of human action, from the musical life of a cathedral to the measurement of time by clocks and calendars, the work habits of a guildsman to the devotional practices of the laity and religious orders. Through a series of transdisciplinary case studies, it explores the multiple ways that objects, texts and music might themselves be said to engage with, imply, and unsettle time, shaping and forming the lives of the inhabitants of the fifteenth-century Low Countries. Champion reframes the ways historians have traditionally told the history of time, allowing us for the first time to understand the rich and varied

interplay of temporalities in the period.

The Book of Time Aug 26 2022 Sam Faulkner travels back in time to medieval Scotland, ancient Egypt, and Renaissance Bruges in search of his missing father.

The Fullness of Time Jan 07 2021 Over the course of the fifteenth century, the Low Countries transformed Europe's economic, political and cultural life. Innovative and influential cultural practices emerged across the region in flourishing courts, towns, religious houses, guilds and confraternities. Whether in visual culture, music, devotional practice, or communal rituals, the thriving cultures of the Low Countries wrestled with time, both through explicit measurement and reflection, and in the rhythms of social and religious life. This book offers a deeper understanding of how time was structured and experienced by different constituencies through a series of detailed readings of diverse cultural objects and practices, ranging from woodcuts and painted altarpieces, to early print books, and to the use of polyphony in the liturgy. Individual chapters are devoted to life in the university towns of Louvain and Ghent, the liturgical rituals at Cambrai Cathedral, and the rich pageantry that marked the courts of Philip the Good and the new Burgundian rulers. What emerges is a complex temporal landscape in which devotional and secular practices and experiences merged into a new "fullness of time."

An Experiment with Time Mar 21 2022

A Time to Die May 30 2020 How would you live if you knew the day you'd die? Parvin Blackwater believes she has wasted her life. At only seventeen, she has one year left according to the Clock by her bedside. In a last-ditch effort to make a difference, she tries to rescue Radicals from the government's crooked justice system. But when the authorities find out about her illegal activity, they cast her through the Wall -- her people's death sentence. What she finds on the other side about the world, about eternity, and about herself changes Parvin forever and might just save her people. But her clock is running out.

The Political Value of Time Nov 04 2020 Waiting periods and deadlines are so ubiquitous that we often take them for granted. Yet they form a critical part of any democratic architecture. When a precise moment or amount of time is given political importance, we ought to understand why this is so. The Political Value of Time explores the idea of time within democratic theory and practice. Elizabeth F. Cohen demonstrates how political procedures use quantities of time to confer and deny citizenship rights. Using specific dates and deadlines, states carve boundaries around a citizenry. As time is assigned a form of political value it comes to be used to transact over rights. Cohen concludes with a normative analysis of the ways in which the devaluation of some people's political time constitutes a widely overlooked form of injustice. This book shows readers how and why they need to think about time if they want to understand politics.

The Grand Canyon Trail of Time Companion Mar 28 2020

A Wrinkle in Time Jan 31 2023 Madeleine L'Engle's ground-breaking science fiction and fantasy classic, now a major motion picture. It was a dark and stormy night; Meg Murry, her small brother Charles Wallace, and her mother had come down to the kitchen for a midnight snack when they were upset by the arrival of a most disturbing stranger. "Wild nights are my glory," the unearthly stranger told them. "I just got caught in a downdraft and blown off course. Let me sit down for a moment, and then I'll be on my way. Speaking of ways, by the way, there is such a thing as a tesseract." A tesseract (in case the reader doesn't know) is a wrinkle in time. To tell more would rob the reader of the enjoyment of Miss L'Engle's unusual book. A Wrinkle in Time, winner of the Newbery Medal in 1963, is the story of the adventures in space and time of Meg, Charles Wallace, and Calvin O'Keefe (athlete, student, and one of the most popular boys in high school). They are in search of Meg's father, a scientist who disappeared while engaged in secret work for the government on the tesseract problem. A Wrinkle in Time is the winner of the 1963 Newbery Medal. It is the first book in The Time Quintet, which consists of A Wrinkle in Time, A Wind in the Door, A Swiftly Tilting Planet, Many Waters, and An Acceptable Time. A Wrinkle in Time is now a movie from Disney, directed by Ava DuVernay, starring Storm Reid, Oprah Winfrey, Reese Witherspoon and Mindy Kaling. This title has Common Core connections. Books by Madeleine L'Engle A Wrinkle in Time Quintet A Wrinkle in Time A Wind in the Door A Swiftly Tilting Planet Many Waters An Acceptable Time A Wrinkle in Time: The Graphic Novel by Madeleine L'Engle; adapted & illustrated by Hope Larson Intergalactic P.S. 3 by Madeleine L'Engle; illustrated by Hope Larson: A standalone story set in the world of A Wrinkle in Time. About Time Nov 28 2022 *Publisher Description*

The Sociology of Time Sep 02 2020 *In a critical, comparative study of the sociological literature, this book explores the term "time," and the various interconnections between time and a broad cluster of topics that create a conceptual labyrinth. Various understandings of time manifest themselves in the context of many individual social problems—there is no single vision in sociology of how to grasp time and address within social theory. This book, therefore, attempts to define an approach to the concept of time and its associated terms (duration, temporality, acceleration, compression, temporal structures, change, historical consciousness, and others). The volume is guided by a critical engagement with three main questions: a) the formation of human understanding of time; b) the functioning of temporal structures at different levels of social reality; c) the role and place of time in general sociological theory.*

Of Time and Chase Feb 05 2021

Until the End of Time Apr 09 2021 **NEW YORK TIMES BESTSELLER** • *A captivating exploration of deep time and humanity's search for purpose, from the world-renowned physicist and best-selling author of *The Elegant Universe*. "Few humans share Greene's mastery of both the latest cosmological science and English prose." —*The New York Times* *Until the End of Time* is Brian Greene's breathtaking new exploration of the cosmos and our quest to find meaning in the face of this vast expanse. Greene takes us on a journey from the big bang to the end of time, exploring how lasting structures formed, how life and mind emerged, and how we grapple with our existence through narrative, myth, religion, creative expression, science, the quest for truth, and a deep longing for the eternal. From particles to planets, consciousness to creativity, matter to meaning—Brian Greene allows us all to grasp and appreciate our fleeting but utterly exquisite moment in the cosmos.*

Time Jul 25 2022 *Time has always been the great Given, a fact of existence which cannot be denied or wished away; but the character of lived time is changing dramatically. Medical advances extend our longevity, while digital devices compress time into ever briefer units. We can now exist in several time-zones simultaneously, but we suffer from endemic shortages of time. We are working longer hours and blurring the distinctions between labour and leisure. For many, in an inversion of the old adage, time has become more valuable than money. In this look at life's most ineffable element, spanning fields from biology and culture to psychoanalysis and neuroscience, Eva Hoffman asks: are we coming to the end of time as we know it?*

The Price of Time Feb 26 2020 *The first book of the next crisis. *Longlisted for the 2022 Financial Times Business Book of the Year Award* All economic and financial activities take place across time. Interest coordinates these activities. The story of capitalism is thus the story of interest: the price that individuals, companies and nations pay to borrow money. In *The Price of Time*, Edward Chancellor traces the history of interest from its origins in ancient Mesopotamia, through debates about usury in Restoration Britain and John Law 's ill-fated Mississippi scheme, to the global credit booms of the twenty-first century. We generally assume that high interest rates are harmful, but Chancellor argues that, whenever money is too easy, financial markets become unstable. He takes the story to the present day, when interest rates have sunk lower than at any time in the five millennia since they were first recorded - including the extraordinary appearance of negative rates in Europe and Japan - and highlights how this has contributed to profound economic insecurity and financial fragility. Chancellor reveals how extremely low interest rates not only create asset price inflation but are also largely responsible for weak economic growth, rising inequality, zombie companies, elevated debt levels and the pensions crises that have afflicted the West in recent years - conditions under which economies cannot possibly thrive. At the same time, easy money in China has inflated an epic real estate bubble, accompanied by the greatest credit and investment boom in history. As the global financial system edges closer to yet another crisis, Chancellor shows that only by understanding interest can we hope to face the challenges ahead.*

The Book of Time Mar 01 2023 *Unravel the mysteries of time, from the Maya calendar to Einstein's wormholes, in this fun and fact-filled exploration for young readers. In this thought provoking book, curious readers will discover all kinds of fascinating information about how and why we think about time. Chapters on mythology discuss Chronos, Janus, and the legend of the Phoenix. Others look at how different cultures perceive time--as a straight line or in circles? Young readers will learn how animals and plants tell time, how the study of longitude and latitude is related to clocks, and why an hour used to last one hundred minutes. Along the way, they'll encounter historic time pieces such as sundials, chronometers, and Al-Jazari's famous 12th-century elephant clock. The book also invites readers to ponder important questions about what time means to us today: can you actually save time? Can you run out of it? And is it*

really better to accomplish more in less time? These concepts are introduced in accessible chapters and illustrated with vibrant drawings. Absorbing and world-enlarging, this elegant book explores a challenging concept in an engaging way that encourages discussion and further learning.

Make Time Jun 11 2021 From the New York Times bestselling authors of *Sprint* comes a simple 4-step system for improving focus, finding greater joy in your work, and getting more out of every day. "A charming manifesto—as well as an intrepid do-it-yourself guide to building smart habits that stick. If you want to achieve more (without going nuts), read this book."—Charles Duhigg, bestselling author of *The Power of Habit* and *Smarter Faster Better* Nobody ever looked at an empty calendar and said, "The best way to spend this time is by cramming it full of meetings!" or got to work in the morning and thought, "Today I'll spend hours on Facebook! Yet that's exactly what we do. Why? In a world where information refreshes endlessly and the workday feels like a race to react to other people's priorities faster, frazzled and distracted has become our default position. But what if the exhaustion of constant busyness wasn't mandatory? What if you could step off the hamster wheel and start taking control of your time and attention? That's what this book is about. As creators of Google Ventures' renowned "design sprint," Jake and John have helped hundreds of teams solve important problems by changing how they work. Building on the success of these sprints and their experience designing ubiquitous tech products from Gmail to YouTube, they spent years experimenting with their own habits and routines, looking for ways to help people optimize their energy, focus, and time. Now they've packaged the most effective tactics into a four-step daily framework that anyone can use to systematically design their days. *Make Time* is not a one-size-fits-all formula. Instead, it offers a customizable menu of bite-size tips and strategies that can be tailored to individual habits and lifestyles. *Make Time* isn't about productivity, or checking off more to-dos. Nor does it propose unrealistic solutions like throwing out your smartphone or swearing off social media. Making time isn't about radically overhauling your lifestyle; it's about making small shifts in your environment to liberate yourself from constant busyness and distraction. A must-read for anyone who has ever thought, "If only there were more hours in the day...", *Make Time* will help you stop passively reacting to the demands of the modern world and start intentionally making time for the things that matter.

Being and Time Nov 16 2021 "What is the meaning of being?" This is the central question of Martin Heidegger's profoundly important work, in which the great philosopher seeks to explain the basic problems of existence. A central influence on later philosophy, literature, art, and criticism—as well as existentialism and much of postmodern thought—*Being and Time* forever changed the intellectual map of the modern world. As Richard Rorty wrote in the *New York Times Book Review*, "You cannot read most of the important thinkers of recent times without taking Heidegger's thought into account." This first paperback edition of John Macquarrie and Edward Robinson's definitive translation also features a new foreword by Heidegger scholar Taylor Carman.

In Search of Time Jul 01 2020 An enjoyable and compelling ride through one of life's most fascinating enigmas "What, then, is time? If no one ask of me, I know," St. Augustine of Hippo lamented. "But if I wish to explain to him who asks, I know not." Who wouldn't sympathize with Augustine's dilemma? Time is at once intimately familiar and yet deeply mysterious. It is thoroughly intangible: We say it flows like a river — yet when we try to examine that flow, the river seems reduced to a mirage. No wonder philosophers, poets, and scientists have grappled with the idea of time for centuries. The enigma of time has also captivated science journalist Dan Falk, who sets off on an intellectual journey *In Search of Time*. The quest takes him from the ancient observatories of stone-age Ireland and England to the atomic clocks of the U.S. Naval Observatory; from the layers of geological "deep time" in an Arizona canyon to Albert Einstein's apartment in Switzerland. Along the way he talks to scientists and scholars from California to New York, from Toronto to Oxford. He speaks with anthropologists and historians about our deep desire to track time's cycles; he talks to psychologists and neuroscientists about the mysteries of memory; he quizzes astronomers about the beginning and end of time. Not to mention our latest theories about time travel — and the paradoxes it seems to entail. We meet great minds from Aristotle to Kant, from Newton to Einstein — and we hear from today's most profound thinkers: Roger Penrose, Paul Davies, Julian Barbour, David Deutsch, Lee Smolin, and many more. As usual, Dan Falk's style combines exhaustive research with a lively, accessible, and often humorous style, making *In Search of Time* a delightful tour through a most curious dimension.

Time and Again Apr 21 2022 Simon Morley is selected by a secret government agency to test Einstein's theory of the past co-existing with the present and is transported back to 1880s New York.

Cycles of Time Aug 14 2021 From Nobel prize-winner Roger Penrose, this groundbreaking book is for anyone "who

is interested in the world, how it works, and how it got here" (New York Journal of Books). Penrose presents a new perspective on three of cosmology's essential questions: What came before the Big Bang? What is the source of order in our universe? And what cosmic future awaits us? He shows how the expected fate of our ever-accelerating and expanding universe—heat death or ultimate entropy—can actually be reinterpreted as the conditions that will begin a new "Big Bang." He details the basic principles beneath our universe, explaining various standard and non-standard cosmological models, the fundamental role of the cosmic microwave background, the paramount significance of black holes, and other basic building blocks of contemporary physics. Intellectually thrilling and widely accessible, *Cycles of Time* is a welcome new contribution to our understanding of the universe from one of our greatest mathematicians and thinkers.

A Geography Of Time Oct 16 2021 In this engaging and spirited book, eminent social psychologist Robert Levine asks us to explore a dimension of our experience that we take for granted—our perception of time. When we travel to a different country, or even a different city in the United States, we assume that a certain amount of cultural adjustment will be required, whether it's getting used to new food or negotiating a foreign language, adapting to a different standard of living or another currency. In fact, what contributes most to our sense of disorientation is having to adapt to another culture's sense of time. Levine, who has devoted his career to studying time and the pace of life, takes us on an enchanting tour of time through the ages and around the world. As he recounts his unique experiences with humor and deep insight, we travel with him to Brazil, where to be three hours late is perfectly acceptable, and to Japan, where he finds a sense of the long-term that is unheard of in the West. We visit communities in the United States and find that population size affects the pace of life—and even the pace of walking. We travel back in time to ancient Greece to examine early clocks and sundials, then move forward through the centuries to the beginnings of "clock time" during the Industrial Revolution. We learn that there are places in the world today where people still live according to "nature time," the rhythm of the sun and the seasons, and "event time," the structuring of time around happenings (when you want to make a late appointment in Burundi, you say, "I'll see you when the cows come in"). Levine raises some fascinating questions. How do we use our time? Are we being ruled by the clock? What is this doing to our cities? To our relationships? To our own bodies and psyches? Are there decisions we have made without conscious choice? Alternative tempos we might prefer? Perhaps, Levine argues, our goal should be to try to live in a "multitemporal" society, one in which we learn to move back and forth among nature time, event time, and clock time. In other words, each of us must chart our own geography of time. If we can do that, we will have achieved temporal prosperity.
